

# Patio Refurbishment & All Paving Maintenance

## Case Study

### Sandstone Patio & Pathways, Nantwich, Cheshire

This patio at a private residence in Nantwich, Cheshire was 10 years old and badly in need of refurbishment. The original sand and cement jointing was cracked and failing, and the paving slabs were discoloured, with a few slabs debonded. An earlier attempt to repoint the failed joints with more sand and cement had been unsuccessful, and as a result, the patio area paving was spoiling an otherwise well maintained garden.

Specialist paving contractor CR Services was approached by the homeowner who immediately knew the solution: Remove the old jointing and reset loose paving slabs with rapid setting mortar, then jet-wash and thoroughly clean with NCC Grime Remover, a heavy duty surface cleaner.

For the repointing, CR Services used GftK's vdw 850+ in stone grey, a tough, non-staining, 2-part epoxy paving mortar, supplied in the UK by NCC Streetscape. This high performance mortar is ideal for all types of paving and a big advantage for home owners in the UK is that it can be applied in inclement weather, so no waiting around for a fine day!

The homeowners were delighted with the advice and skilled workmanship from CR Services, who have returned their patio to not only looking as good as new, but in fact tougher and more sustainable than it was when first laid.
